

## The Mobile, Secure, Cost Effective & Integrated ePrescribing Solution

### DxScript™ Benefits:

1. Saves health professional's time.
2. Enhances office productivity.
3. Improves Patient Safety and Quality of Care.
4. Add other productivity modules seamlessly, as needed: DxLab™, DxEMR™, DxImaging™, DxCardiology™, DxRadiology™ and DxDocuments™.
5. DxScript™ can pay for itself by taking advantage of the MIPPA 2% incentive rebate program.
6. Print clear and clean scripts using your computer or PDA, avoiding common script errors.
7. Includes intelligent Patient Data Exchange (PDX) module allowing your patient Scheduling information to merge into our DxScript application.

The DxScript™ ePrescribing service puts eligibility, benefits and formulary information at your fingertips at the time of prescribing. This enables prescribers to select medications that are on formulary and are covered by the patient's drug benefit. It also informs you of lower cost alternatives such as generic drugs.

Prescribers can access a timely and clinically sound view of a patient's prescription history across providers, at the point of care. This decreases the risk of preventable medication errors.

DxScript™ replaces old, error-prone approaches to writing. Printing new prescriptions electronically in your office reduces the risk of medication errors associated with poor handwriting, illegible faxes and manual data entry. Using DxScript™ to process prescription renewals saves you time and money by dramatically reducing the number of phone calls and faxes typically associated with the prescription renewal authorization process. (SureScript)

### DxScript™ provides:

1. Fully automated, Secure and Easy importability of PDX data into DxScript without the need for any user input.
2. FREE DxScript™ support by phone or e-mail for the first 90 days.
3. Support for 100 Practice Management Systems
4. Wireless support for major PDAs including Palm, iPhone, BlackBerry, etc.
5. Automatic patient specific DUR and formulary checking, reducing drug interaction issues.
6. SureScripts and RxHub integration with drug benefit details, formulary data and medication history from pharmacies and physicians outside the practice.
